

Parker Aerospace on the Boeing 787

BILL OF MATERIAL

AFT STRUT FAIRING MODULES

Structural frame assemblies
Utility hydraulic components
Hydraulic fluid conveyance
Electrical wiring and connectors
Mounting equipment and hardware
Hydraulic ground service
equipment quick disconnects

HYDRAULIC COMPONENTS

Pumps
Reservoirs
Filter modules
Hydraulic system software (HYDIF)
Hydraulic maintenance hardware
Sensors
Flow control valves
Accumulators
Heat exchangers
Hydraulic ground service
Equipment quick disconnects
Fuses
Attenuators

OTHER AIRFRAME COMPONENTS

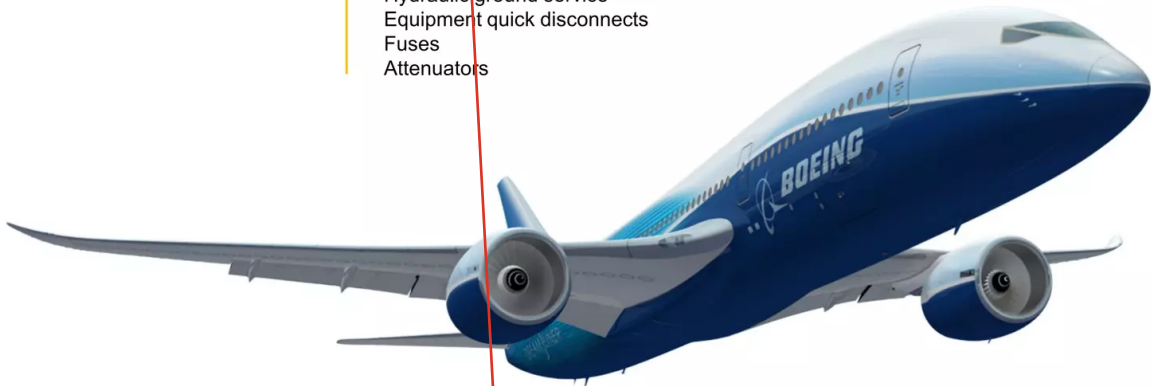

Interior cabin cooling system
Potable water pump
Hydraulic power pack
APU fuel metering unit

ENGINE COMPONENTS Rolls-Royce Trent 1000

Solenoid actuation
Compressor handling bleed
valves
Turbine case cooling valves
Engine anti-ice valves
Starter/generator cooling
subsystem valves & ducts
Engine oil heat management
valves
Fuel atomization nozzles
Manifold
Oil reservoir
High-temperature flexible hoses
Brackets & seals
Fluid conveyance components
Hoses with quick disconnects

GE GENx

Fuel atomization nozzles*
Hose/tube assemblies
Quick disconnects
Fluid conveyance equipment

In manufacturing, a bill of materials (BOM) lists all required materials and their quantities for a process. Usually, The list contains each item's description, quantity, and price. To analyze material costs, use an inquiry tool in the SAP ERP system to use advanced search for each component and BOM price for audit,by utilizing a parameter to sort the target item name for documentation to support procurement finance team .

First Step: Search the requested BOM number.

☐ Material ☒ BOM

Second Step: By applying "Filter" in the SAP system to select a group of items from the same supplier for output parameter. View BOM details and identify price change on audit log.

BOM number	Item ID	Item name	Item description	Owner/Procurement Agent	Price by Revision	Audit Log	Price Rollup
00003456	10004	Sensors	System sensor	Purchaser name	Analyze the initiated price	and the extended price	and verify price change.

Third Step: Monitor risk overview by setting automated ERP SAP system and investigation.

Risk Overview

Control Risk

View chart data to customize the risk manaegment report with a specified .

Enter a risk name to identify any errors with each vendor business process on AP account and other activities.

☐	Price ***	Quantity ***	Extended Price ***	Category ***	Material Code ***
☐	Add term	Add term	jk	Set initial value	000000000000001951
